

ANEESH AJAYAKUMAR

AI/ML ENGINEER

Bangalore, Karnataka | +91 8113000236 | Gmail: aneesh.ajay39@gmail.com |
LinkedIn: <https://www.linkedin.com/in/aneesh-ajayakumar> | Github: <https://www.github.com/Aneesh236>

PROFESSIONAL SUMMARY

MSc Artificial Intelligence graduate with a strong passion for emerging AI technologies and a solid foundation in computer science and machine learning. Experienced in ML frameworks like Generative AI, LLM, RAG, Prompt Engineering, Langchain, LangGraph, AI Agents, Hugging Face, TensorFlow, Deep Learning and Keras, with proficiency in Python, Javascript, C++, SQL and strong knowledge of data structures and algorithms.

Seeking a challenging role to contribute to innovative projects while continuously expanding technical and problem-solving skills

PROJECT EXPERIENCE

TravelMind – AI-Powered Travel Planner (Jan 2026)

Site Url : <https://travel-mind-ai-planner.netlify.app/>

Tech Stack: Python, LangChain, OpenAI API, HTML, CSS, JavaScript, Netlify Functions, jsPDF

- Developed an AI-powered travel planner using Python, LangChain and the OpenAI API to generate personalised itineraries based on destination, budget, duration, traveller type and interests.
- Converted the original Gradio prototype into a responsive HTML, CSS and JavaScript website with an intuitive, mobile-friendly interface.
- Implemented a secure serverless backend using Netlify Functions and environment variables, protecting the OpenAI API key from frontend exposure.
- Created downloadable, magazine-style PDF itineraries featuring daily schedules, accommodation, food, transportation, packing lists, budget estimates and travel tips.

Research Project: Fruit recognition system using Convolutional Neural Network (May2023)

Github: <https://github.com/Aneesh236/Fruit-recognition-system-using-CNN>

Tech Stack: Python, TensorFlow, Keras, OpenCV, CNN, NumPy, Image Preprocessing, Data Augmentation, Fruits-360 Dataset, Deep Learning, Git, GitHub

- Developed a deep learning-based fruit recognition system using Convolutional Neural Networks (CNN) for multi-class image classification.
- Applied image pre-processing and data augmentation techniques, including rescaling, shear transformation, zooming, and horizontal flipping, to enhance model robustness.
- Built and trained a CNN architecture with Conv2D, MaxPooling2D, Dense, and Dropout layers, achieving 96% test accuracy using the Adam optimizer.
- Developed an image prediction pipeline using OpenCV and Tensorflow to classify unseen fruit images and visualize prediction results.

Master's Thesis: Fake Automobile Insurance Detection using SMOTE and ADASYN (Aug 2022)

Github: <https://github.com/Aneesh236/Fake-insurance-detection-using-ADASYN-and-SMOTE>

Tech Stack: Python, Scikit-learn, Random Forest, XGBoost, Support Vector Machine (SVM), SMOTE, ADASYN, Pandas, NumPy, Machine Learning, Classification, Model Evaluation, Git, GitHub

- Developed an automobile insurance fraud detection system using machine learning algorithms, including Random Forest, XGBoost, and Support Vector Machine (SVM).
- Performed data pre-processing and evaluated baseline model performance using metrics such as Accuracy, Precision, Recall, F1-Score, and ROC-AUC.
- Addressed the class imbalance problem using SMOTE (Synthetic Minority Over-sampling Technique) and ADASYN (Adaptive Synthetic Sampling), and compared their impact on model performance.
- Improved fraud detection accuracy from 98.55% to 99.87% using Python, Scikit-learn, SMOTE, and ADASYN, demonstrating the effectiveness of data balancing and model optimization techniques.

CORE SKILLS

Languages: Python, Java, C++, PHP, HTML, CSS

AI/ML: Generative AI, LLM, Langchain, LangGraph, AI Agents, RAG, Tensorflow, Keras, NumPy, Pandas Scikit-Learn, Predictive Modelling, Data Mining, Big Data, Prompt Engineering, Implementing AI Applications

Tools: Hugging Face, Gradio, GitHub, VScode, Jupyter Notebook

Concepts: Data Structures & Algorithms, Feature Engineering, Model Evaluation, Data Analysis

WORK EXPERIENCE

Asst. System Engineer - University of East London (2023 – 2025)

- Co-ordinated among experienced technicians with day-to-day tasks including backups, system updates and network upgrades
- Installing, configuring, and maintaining software and hardware components of computer and network Systems
- Repairing and replacing damaged computer and network components
- Maintaining and updating technical documentation regularly

EDUCATION AND QUALIFICATIONS

University of East London (2021–2023) – MSc Artificial Intelligence

Specialization in Machine Learning, Data Mining, Predictive Modelling, and hands-on experience in Python-based data analysis and fraud detection.

APJ Abdul Kalam Technological University, India (2016–2020) – B.Tech in Computer Science

With coursework in Machine Learning, Artificial Intelligence, Data Structures, Algorithms, DBMS, Operating Systems, and Mathematics.

CERTIFICATIONS

- LLM Engineering, RAG, & AI Agents Masterclass - Udemy
- Foundation of Generative AI – AWS Skill builder
- Google Data Analytics Professional Certificate – Coursera
- MATLAB Certifications: Onramp, Machine Learning, Image Processing, and Deep Learning
- Machine Learning in Python – Udemy
- Complete Web Development Bootcamp – Udemy
